

## PROGRESS REPORT

# Year 9 Science

DATE STARTED: August 2017

DATE COMPLETED: November 2018

Student: [REDACTED]

### Tutor comments

[REDACTED] has worked consistently hard throughout her course, showing excellent understanding in a wide range of topics, and often giving such high-quality answers that they would be suitable at IGCSE level. Her weaknesses tended to show on genetics and antibodies, in which she needed to include a few more key words and specific details, but for the vast majority of the topics, she gave clear, detailed answers with good explanations of the ideas she studied throughout the course.

### Final test feedback

[REDACTED] did extremely well, giving, clear, detailed and mature answers, particularly in longer questions. She did well on experimental design, though a little bit of fine tuning with understanding ideas like reliability and validity will help her earn more marks in the future.

### Progression to IGCSE

With the quality of work she has shown throughout the course, she should find the transition to IGCSE level very smooth. She will be able to revisit topics she found more difficult here, and I am confident she will show great improvement in these areas.

Lyndsay Baker  
Science Tutor

The average assignment  
grade attained was:  
83%

The final test grade  
attained was:  
89%

This is to certify that  
[REDACTED]  
has completed  
Wolsey Hall Oxford's  
Year 9 Science course.
